STOICA OVIDIU
Senior Front end Developer

👤 Profile

Experienced Senior Front end Developer (Web and Mobile), adept in all stages of advanced development. I always love to learn new things and sharpen my skills. I am very good at helping other people advance their tech skills.

💼 Employment History

Software Developer at Google, Remote
May 2021 — Present

I work as a consultant on the Fitbit subbranch at Google, building customer-facing watch applications.

I created a testing library covering all watch-specific widget testing, and the library is now used by multiple development teams. I actively maintain it.

Tech: **Typescript, C, Node.js, React**

Consultant at 3E, Remote
January 2022 — Present

I consulted for a company using Clojure. Results:

- I created high performance API endpoints on a big codebase
- I created an internal application to use the API
- I lead a team to deliver customer critical features

Tech: Clojure, ClojureScript, Typescript, PSQL

Fullstack Developer at Framey, Remote
June 2020 — May 2021

Framey is a startup in the travel domain. The product is a mobile application that helps people find the best photo spots from attractions worldwide.

- converted 80% of legacy codebase to Typescript
- recommendations based on user location
- animations using Reanimated 2

*Tech***: React, React Native, Node.js, Typescript, PostgreSQL**

Lead Developer at Deepstash, Remote
April 2018 — June 2020

Deepstash is a productivity app that helps you absorb information faster by providing bite-sized insights. I loved working at Deepstash, and I view it as the time I grew the most.

I coordinated the mobile team, assigning responsibilities and helping developers with issues. I helped with improving the performance of the React Native app (reduced launch time from 3s to 0.4s) and created

Brazilian Jiu Jitsu

many core product features including the full testing system of the mobile app.

Tech: **React Native, React, Typescript,** Redux**, Animations, Detox**

Software Developer at Wyliodrin, Bucharest
June 2017 — January 2018
[Wyliodrin]{.blue} is a software development company with in-house products and also development services. I helped develop an education platform for programming. I worked on the server that served file systems to Raspberry Pi's connected to the local network to reduce the setup time for the boards for students drastically.

Tech: **Node.js, Vue.js, Bash, Linux, Raspberry Pi**

★ Side Projects

Designvote
December 2020 — Present
[Designvote]{.blue} is a tool to help designers get feedback faster, either internally from colleagues or from a public audience.

I started this project after a designer at a startup I was working on complained about how much time it took to get feedback. It was an excellent opportunity to learn Clojure, which I recently discovered.

I continued to improve the product through 2020, and currently, the website still has 20-30 visitors weekly. The conclusion was that the problem was not bad enough for people to pay for it, so I switched to just maintaining it but no active development.

Tech: **React, Clojure, PostgreSQL, Chakra-UI**

☁ Education

Computer Science Degree, Faculty of Automatic Control and Computers, Bucharest
October 2015 — June 2019
During University, I was a Teaching Assistant for:

- Introduction to programming
- Introduction to Operating Systems
- Elements of Mobile Programming
